

Michael J. Schumm

US Citizen | MikeSchumm8@gmail.com | (631)-626-6107 | www.linkedin.com/in/mikeschumm1

Education

University of Nevada-Las Vegas

Las Vegas, Nevada

B.A. in Computer Science

May 2026

- **GPA:** 3.83/4.00
- **Related Coursework:** Machine Learning, Data Structures & Algorithms, Operating Systems, Databases, Cloud Computing, Web Development
- **Awards and Honors:** Dean's List (2022-2026)

Experience

Los Alamos National Laboratory

Los Alamos, New Mexico

Robotics Intern

June 2026 – Aug 2026

- Developed humanoid robot simulation environments using Isaac Lab and Isaac Sim for reinforcement learning research.
- Created URDF-based robot models to support physics-based simulation and control development.
- Evaluated and optimized reinforcement learning training workflows, including reward design and policy performance analysis.

Handshake AI Fellowship

Remote

AI Trainer - Video Generation

Oct 2025 - May 2026

- Developed and evaluated domain-specific prompts to assess the performance of large language models (LLMs) in video generation.
- Analyzed LLM outputs for scientific accuracy, clarity, and depth in specialized subfields.
- Contributed to improving AI understanding of complex video generation through expert review and feedback.
- Conducted independent research to support prompt development and evaluation tasks.

Lending Officer Advisors

Las Vegas, Nevada

Full-Stack Developer

Apr 2025 – Jan 2026

- Created an automated lead-routing and real estate matching system that connected loan officers with real estate agents based on ZIP code, increasing loan officer conversion from 5% to 20%.
- Implemented a Flask backend to process leads and match real estate agents to ZIP codes in real time.
- Designed an automated Google Sheets database using Google Forms and JavaScript (Google Apps Script), reducing manual data entry and improving efficiency.
- Automated spreadsheet generation, sharing permissions, and folder organization using Google Apps Script, streamlining team onboarding and management processes.
- Developed an HTML5 frontend optimized for fast rendering and usability for call center staff and loan officers.

Algoverse AI Research

Remote

AI Researcher

Nov 2024 – May 2025

- Built a mechanistic interpretability pipeline using PyTorch and sparse autoencoders to analyze the cause of hallucinated outputs in Gemma 2-2b's (LLM).
- Generated 1,200 summaries and evaluated hallucinations using BERTScore and manual annotation to assess factual consistency.
- Identified patterns in activated features by comparing hallucinated and factual outputs across early, middle, and late layers.
- Isolated activation features that consistently appeared during hallucinated responses.

Skills

Programming Languages: Python, C++, JavaScript, SQL, HTML/CSS, Bash

Machine Learning & AI: PyTorch, Scikit-Learn, Reinforcement Learning, Computer Vision, BERT, Sparse Autoencoders

Frameworks & Tools: Git, Linux, Flask, Google Apps Script
